

## **Butler Sink Installation Instructions**

### **SINK CABINET REQUIREMENTS.**

The Butler Sink requires a special sink cabinet with the front cut out to accommodate the APRON front of the sink. We recommend that an experienced cabinetmaker is responsible for all cabinet work. Ensure the cabinet will not foul the sink front apron or mounting flange.

### **CABINET FITMENT**

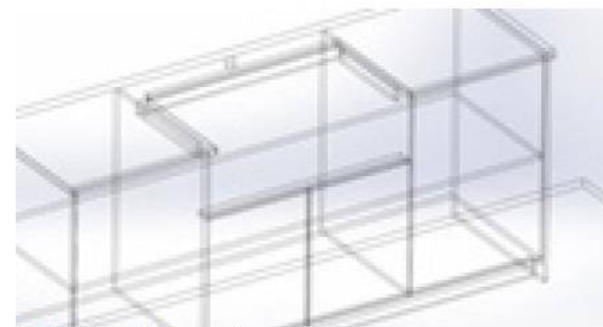

We highly recommend that the actual sink to be installed is available for the cabinet maker during manufacture of cabinet and support frame.

### **SINK DIMENSIONS**

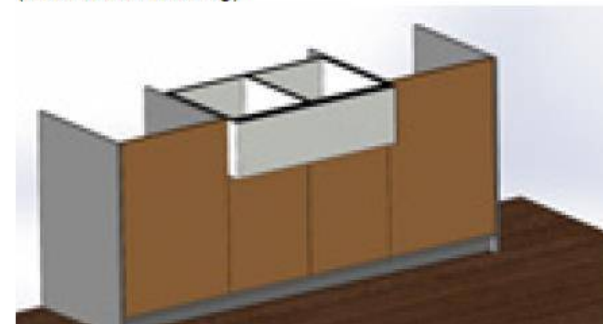

Product dimensions will vary from one sink to the next. Accepted industry standards for accuracy of hand made products of this type is within 2%

### **FITTING THE SINK**

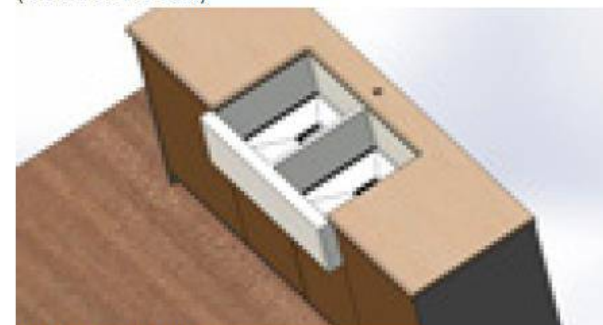

Mount the sink on the shelf so it is flush with the top of the cabinet then seal the mating surface with silicone and install the counter/bench top.

(Install wood bracing)

(Install butler sink)

(Install counter top)
