Technical Specifications

Inlet Connections: All 1/2" BSP
 Operating Pressure: 150kPa - 500kPa
 Operating Temperatures: Recommended hot water supply 50°C, maximum 70°C. AS 3500 requires all hot water supplies to any sanitary fitting to be tempered to 50°C.

Ceramic Cartridge Adjustment

Do not remove the ceramic cartridge from the body assembly while carrying out the following adjustments. Note, the cartridge is factory set for maximum temperature

Maximum hot supply (as fitted in faucet)

Maximum limitation of hot supply

“In situ” testing

The maximum working pressure of the ceramic cartridge is 1000kPa. Do not hydrostatic test the installation with this mixer installed. Damage to the ceramic cartridge may occur, voiding our warranty.

Installation

Refer to diagram at right and back.

1. A single 35mm diameter hole is required in the mounting surface. The mounting surface can be a maximum of 40mm thick.
2. Screw the threaded studs into the base of the mixer. Insert the O ring into the groove in the bottom of the base ring and fit the base ring to the bottom of the mixer.
3. Insert the flexible hoses through the hole in the mounting surface (from the underside) and screw them into the base of the mixer.
4. Feed the threaded studs through the hole in the mounting surface. Fit the mounting gasket and mounting plate onto the threaded rods.
5. Tighten the mounting nuts to secure the mixer in place.
6. Connect the flexible hoses to the hot and cold supplies (hot on the left, cold on the right).

Hose Requirements for mixers

The maximum working pressure of the ceramic cartridge is 1000kPa. Do not hydrostatic test the installation with this mixer installed. Damage to the ceramic cartridge may occur.

We recommend that this product is installed by a licensed plumber.
